Pre-retirement Seminars

Two-day pre-retirement seminars, open to Walter Reed National Military Medical Center's Department of Defense GS employees planning to retire within the next five years, are scheduled for July 26-27, and Aug. 22-23. Pre-registration is required. Registration forms are available on the National Capital Region, Medical Directorate MD website: <http://www.capmed.mil/>, and on the WRNMMC and Fort Belvoir Community Hospital banners. For more information, contact dha.bethesda.wrnmmc.list.preretirement-seminar@mail.mil.

Be In The Know

Don't be the last to find out news and information concerning Walter Reed National Military Medical Center and Naval Support Activity Bethesda. Text WRBALERT, NSABALERT, MWRBETHESDA or NSABTRAFFIC to 888-777 and receive up-to-the-minute alerts on news that may affect you. Standard data and texting charges apply. For questions or more information, call 301-319-2554.

Fleet, Family Support Center

The Fleet and Family Support Center (FFSC) on Naval Support Activity Bethesda offers programs intended to assist service members and their families with military life. FFSC's workshops and seminars include: job search strategies for military spouses; federal resume writing; time management; credit management; consumer financial awareness; interview skills; pre-deployment briefings; return and reunion briefings; and more. For more information, call 301-319-4087, or visit FFSC in Building 11, first floor.

Kobelja Takes the Helm of WRNMMC

By Bernard S. Little
WRNMMC Command
Communications

Navy Capt. (Dr.) Mark A. Kobelja assumed authority of Walter Reed National Military Medical Center during a ceremony June 30 in WRNMMC's Memorial Auditorium.

Kobelja replaces Army Col. Michael S. Heimall, who retired from the military after more than 30 years of service, serving the last 13 months as the WRNMMC director.

Navy Rear Adm. (Dr.) David A. Lane, director of the National Capital Region Medical Directorate, officiated the change of authority ceremony, stating, "This is truly an important event in the life cycle of Walter Reed National Military Medical Center, one of the most storied and recognizable institutions in the U. S. military and in American medicine.

"If you say, 'Walter Reed National Military Medical Center,' [people] naturally think of the greatness of military medicine," Lane said. He added WRNMMC is where "America's heroes, wounded warriors, come to heal." WRNMMC offers "unquestionably world leading comprehensive ballistic rehabilitative care" [within its Military Advanced Training Center], diagnosis and treatment of traumatic brain injury [in the National Intrepid Center of Excellence], the only Department of Defense medical center with an enhanced bio-containment unit and special pathogen lab for viruses like Ebola and other infectious diseases, the only DOD medical center performing solid organ transplants, and the John P. Murtha Cancer Center [the only designated cancer center of excellence in DOD], which is also spearheading the White House's Cancer Moonshot military efforts.

"[In addition], nearly 40 percent of DOD's graduate health education and over a third of its clinical research gets done [at WRNMMC]," Lane added.

"It takes a special breed of leader to lead an iconic organization like Walter Reed National Military Medical Center, [and] Col. Michael Heimall has been just that kind of special leader," Lane continued. "This is essentially his fifth command tour," the admiral added, explaining Heimall has commanded an Army dental activity, medical activity, Army hospital, Army medical center and WRNMMC.

Lane said while Heimall "will be greatly missed and is leaving big shoes to fill," Kobelja "is the right leader to fill those shoes." He added Kobelja is among that "special breed of leader" poised "to direct America's medical center [WRNMMC]. I have complete trust and confidence that he'll pick up right where Colonel Heimall

PHOTOS BY MC2 KEVIN CUNNINGHAM

Newly installed Walter Reed National Military Medical Center Director Navy Capt. Mark Kobelja addresses the audience during the change of command ceremony June 30.

left off."

Kobelja is no stranger to WRNMMC or the Naval Support Activity Bethesda campus. He completed his medical degree at the University Services University on NSAB, as well as clinical training in anesthesiology at the former National Naval Medical Center and pain medicine training at the former Walter Reed Army Medical Center, predecessors of WRNMMC. He also served on the NNMC staff as an anesthesiologist, as well as department head of Anesthesiology and Pain Medicine, and chair of the Executive Committee of the Medical Staff and director for Surgical Services, overseeing the integration and transition of surgical staffs of WRAMC and NNMC into WRNMMC. His other previous assignments included deputy commander of the Naval Medical Center San Diego, and commanding officer of Naval Hospital Camp Pendleton, Marine Corps Base Camp Pendleton, California. Prior to coming to WRNMMC as director, Kobelja served as Fleet Surgeon for U.S. Naval Forces Europe/Africa and U.S. Sixth Fleet.

At the change of authority, Kobelja saluted "the unwavering service" of Heimall and the Heimall family. "Congratulations on a distinguished career. Well done. You have built a brilliant leadership team and your work with our external partners has set the stage for generations of success."

The new WRNMMC director said to the medical center staff, "It's an honor to work with you again in this noble endeavor. This facility is the descendant of two great institutions, and you have been faithful to the legacies of selfless service, excellence, and compassionate care to our nation's heroes and their families, [and] champions of expert research and education that has transformed medical and surgical care throughout the world, all while many of

you have gone into harm's way alongside our brothers and sisters in arms. You are leading the way for a grateful nation. Our patients and their families need us, and we have the watch."

Guest speaker for Heimall's retirement, Dr. Richard W. Thomas, USU president, also commended the service of the Heimall family, stating the colonel "is another link in a family that has dedicated themselves to service to our nation and their communities.... Over 30 years of service, [Heimall] has dedicated himself to ensuring our service members and their families are taken care of every day and receive world-class care."

Heimall explained one of the things that has made his career rewarding are his "teammates — battle buddies, shipmates and wingmen, pulling each other along, pushing to reach a goal that at times you feel there is just no way you're ever going to get to, but you do.

"The Army and Navy have blessed me with incredible teams to help me do

my mission," Heimall added. He called WRNMMC "a very, very special place with a great mission — the opportunity to care for America's most severely injured service members and their families."

The colonel said the men and women who serve in uniform, along with their families, "have written a blank check to the United States of America with their lives. When they go into harm's way, they deserve to know that there is a health-care system behind them that is going to spare no expense or sacrifice to bring them home safe and return them to their families as productive Americans.

"Our patients and our staff are really the best America has to offer. They deserve the absolute best medical system we can give them. We need to stop talking about protecting our service-specific equities, resources and control. We need to spend our time talking about how we are going to best care for America's sons and daughters," Heimall added.

Cardiac Nurse Celebrates 45 Years of Federal Service

By Bernard S. Little
and Joe Nieves
WRNMMC Command
Communications

Francine Joyce Bryant tells it to you straight, but with a touch of humor and sincere compassion. The smile on her face remains constant, even when the topic of discussion turns serious. And most importantly, she knows her stuff, especially when it comes to her passion for more than a half century – cardiac care and nursing.

Bryant has been a cardiac nurse for more than 52 years. Thirty-five of those years she has worked at the former Walter Reed Army Medical Center, and more recently the Walter Reed National Military Medical Center, and recently the leadership team at the hospital honored her for 45 years of federal service. She had initially begun her career at the National Institutes of Health in 1965, but left to join the Walter Reed team from 1968 to 1971. She went back to NIH in 1971 and worked there until 1979 when she came back to the Walter Reed AMC. She worked here until 2001 when she left to work at Shady Grove Medical Center, but returned to Walter Reed in 2007.

Currently, Bryan serves as the head nurse of the cardiac rehabilitation center and coordinator for the Heart Failure Clinic in Cardiology at Walter Reed Bethesda.

“It’s been an evolution,” said Bryant of her lengthy and rewarding career.

Born in Savannah, Georgia, Bryant explained how her family moved often, so she’s “from everywhere in general and no place in particular.” But she calls the Bethesda/Rockville area home, having arrived here Aug. 1, 1965 to begin her nursing career at NIH.

“When I was a girl, the thing about what girls did after they graduated from high school was kind of limited,” Bryant said.

PHOTO BY JOSEPH NIEVES

Francine Bryant serves as the head nurse of the cardiac rehabilitation center and coordinator for the Heart Failure Clinic in Cardiology at Walter Reed Bethesda.

*“It’s been an evolution,”
Bryant said.*

She explained most women at the time became secretaries, teachers or nurses. “I thought I try nursing,” she continued.

“I hired myself out when I was a teenager as a nurse’s aide at the local hospital in Ohio, where we were living at the time,” Bryant said.

“When you start out at the bottom rung and you find something redeeming in that, I went, ‘This is it,’” she recalled in describing how she came to the decision that nursing was her passion and what she wanted to do with her life.

“I applied to three nursing schools. I wanted to go to the Hospital of the University of Pennsylvania because it was a big medical center with a good reputation. I got accepted to the two other hospitals I had applied to, but I hadn’t heard from Penn. I called them up and said, ‘If I don’t qualify, I would just like to know.’ I was brazen,” she recalled with a laugh, but her fortitude paid off.

“I got my appointment to come in for

an interview the next week, and I was accepted,” Bryant said.

She explained how the Hospital of the University of Pennsylvania “was a grand place to go to school. They really believed in educating you and not just training you, which is a big difference.”

Bryant said one of the two “seminal moments in her life” occurred during her senior year in nursing school at Penn.

“We were tasked to create a presentation to our classmates, choosing an organ and a disease that affects that organ.” She and her partner for the project “got stuck with the liver. It’s a fascinating organ and I have the utmost respect for what it does, but [the project] was the hardest thing I’d ever done.”

She added that two of her other classmates did their project on the heart and discussed the congenital defect called Tetralogy of Fallot, named after French physician Dr. Etienne-Louis Arthur Fallot. The condition affects infants, who are commonly referred to as “the blue babies” because of the bluish color to their skin caused by the heart defect. “They died very quickly after birth because of [poor] blood circulation.”

“I sat [in class] in utter rapture,” Bryant remembered as she listened to her classmates describe the condition. She said she thought to herself then, ‘That’s what I want to do.’ And that’s what she has done for more than five decades — been a cardiac nurse of one form or another.

Bryant said the other seminal moment in her life happened during the 1970s while she was working at NIH. She had applied for a job as a school nurse at “a very exclusive girl school,” which she thought would be a change from what she had been doing. She was very close to being accepted for the position. “Literally at the 11th-and-three-quarters hour, the school called me up and said they had an experienced school nurse who had also applied for the job, and that while they

appreciated my application, they decided to go with her.

“Like clockwork, the head of the monitoring department at NIH came to me and said cardiology was looking for a nurse to run the stress lab,” Bryant continued. She applied for the position and got it.

“That was a huge breakthrough for two reasons,” she explained. “Nurses had not done stress test in those days,” she said, so she was breaking ground. In addition, she got to work with the echocardiograph machine, which was new to the field at that time. “It was very much in preliminary phase, so I turned out to be NIH’s first echo tech. We built up [stress testing] to be a world-class division of cardiology,” she said, adding the experience kept her on the cutting-edge of all that was going on in the field of cardiology at the time.

Throughout the course of her career, Bryant said she’s been asked on numerous occasions to be a part of something new, groundbreaking and experimental, and her response has always been, “Sure.” She explained this has kept her up-to-date on the advances in the field.

“Each of my changes in jobs built on what went before, so it has always been a progression,” Bryant continued. “Need and want kind of merged, so I’ve had a phenomenal career. It’s been so interesting and it’s been fun,” she added.

She said at NIH she got to work with Dr. Kenny Kent, one of few cardiologists in the United States at the time doing angioplasty, prior to the evolution of stents. “At that time, by-pass was pretty new, so to think you could get the kind of results we did with angioplasty without patients having the zipper down their chests was like, ‘Man, that is so cool,’” she laughed.

Bryant said she’s been lucky during her career to be able to go back and

Parking Permit Redistribution Starts in July

By Andrew Damstedt
The Journal

Naval Support Activity Bethesda (NSAB) will start issuing new parking permits in mid-July beginning with red permit holders.

NSAB Transportation Officer Ryan Emery said the redistribution of parking permits helps the installation better track who has parking permits.

“We’ll be relying upon our mission partners to provide

us with lists of staff who will receive a new permit based on their cap limit,” Emery said. “Each mission partner has a limit based on their population size in relation to the population on the installation.”

The new parking permits have a holographic sticker with NSAB’s logo, which is expected to reduce the number of counterfeit permits, he said.

Walter Reed National Military Medical Center (red permits) is scheduled to distribute in July followed by Uniformed Service University of the Health

Sciences (green permits), then all other commands (purple permits), and finishing with barracks residents (blue and yellow permits).

The redistribution is expected to go to September as he said there are several thousand permits to give out.

People should make sure their vehicle is properly registered with the Pass and ID office, he said.

Emery said the new parking garage on Stokes Road will be a red-permit parking facility and is expected to open this

summer. Other changes include the parking garage adjacent to Navy Gateway Inns and Suites will have red-permit spaces on the upper levels and the N-lot adjacent to the Armed Forces Radiobiology Research Unit will become a green-permitted lot.

“Folks with purple permits will have to start targeting Building 17 or the Z-lot,” he said. “We’re going to get the large vehicles out [of the Z-lot] so the majority of the spaces will be available for purple-permit parking.”

USU Alumnus Named Air Force Flight Surgeon of the Year

By Sarah Marshall
USU External Affairs

Uniformed Services University of the Health Sciences (USU) alumnus Air Force Maj. (Dr.) Philip Flatau recently earned the prestigious Malcom C. Grow Air Force Level Flight Surgeon of the Year award for 2016, recognizing his outstanding achievements in providing exceptional aeromedical support.

The award is presented by the Society of United States Air Force Flight Surgeons (SoUSAFFS) to flight surgeons actively engaged in flying and special operations missions. Nominees must have demonstrated concern for flight personnel by developing rapport with flyers, and must have shown an ability to control aeromedical hazards faced by flyers, while also improving the medical service, health or safety of the aviators.

Flatau is currently serving as the Deputy Surgeon assigned to the Air Force's new 492nd Special Operations Wing, with operational duties located at Duke Field, Florida. He is responsible for medically preparing Combat Aviation Advisors for rapid global employment, allowing for successful Air Force Special Operation Command (AFSOC) aviation advising operations. He also provides comprehensive medical oversight, training, and hands-on care in support of worldwide Special Operations-focused global health engagements.

The flight surgeon began his military career in 2004 upon receiving his commission as an ROTC graduate at Westmont College in Santa Barbara,

PHOTO COURTESY AIR FORCE MAJ. (DR.) PHILIP FLATAU

Air Force Maj. (Dr.) Philip Flatau, left, recently earned the Malcom C. Grow Air Force Level Flight Surgeon of the Year award for 2016, recognizing his achievements in providing exceptional aeromedical support. Throughout his career, he has been afforded many unique opportunities, such as assisting in the development of the first-ever Nigerian-led casualty evacuation program.

Calif., with military studies at Loyola Marymount University in Los Angeles. After graduating from Westmont with honors, he was accepted into USU's F. Edward Hebert School of Medicine, where he graduated in 2008, again with honors, earning his Doctor of Medicine degree. He went on to complete his three-year residency in Family Medicine at Eglin Air Force Base, Florida, where he served as Chief Resident, during which time he also completed USU's graduate Military Tropical Medicine Course

in 2010. After completing his residency in 2011, Flatau went on to become the first flight surgeon assigned to the 22nd Special Tactics Squadron at Joint Base Lewis-McChord, where he served from 2011 to 2014.

Throughout his career, and especially since graduating from USU, Flatau said he has been afforded many unique opportunities, such as assisting in the development of the first-ever Nigerian-led casualty evacuation (CASEVAC) program. Facing scarce resources and many significant challenges across the Sahara, his team collaborated with Nigeria's armed forces to stand up the program that trained Nigerian students on real-world CASEVAC principles while providing basic, yet life-saving, care en route to higher-level medical care. This program, and the Special Operations Command Africa model that influenced it, he said, has become one template for the rapidly growing Global Health Engagement/International Health Specialist community.

He attributes his achievements to the military-specific holistic training he received at USU, which he also believes has prepared him to operate within an operational environment where thinking outside the box and communicating effectively, respectfully, and collaboratively is key. He added that he has been incredibly fortunate to work with such an incredible AFSOC team (to include medical planners, physician assistants, physicians and independent duty medical technicians) and credits his recent award to the hard work and dedication of this team who, he said, provide outstanding care in often extremely remote/austere locations.

Walter Reed Bethesda Recognizes Master, Associate Master Clinicians

By Bernard S. Little
WRNMMC Command Communications

Walter Reed National Military Medical Center recognized more than 50 of its clinicians with Master and Associate Master Clinician distinctions during a ceremony June 16 in Memorial Auditorium.

WRNMMC's Executive Committee of the Medical Staff selected the recipients for the honors based on their "significant contributions to the mission of the medical center," stated Navy Cmdr. (Dr.) Satyen Gada, president-elect of the Medical Staff.

"Specific criteria for the selection include proven excellent outcomes, superior patient satisfaction, high clinical volume, and contributions to training, education and research," Gada added. He called those honored, "Walter Reed's finest."

Current president of the WRNMMC's Medical Staff, Navy Cmdr. (Dr.) Randy S. Bell said Navy Capt. John Bassett and Jared Antevil started the annual Master Clinician Recognition Ceremony at the medical center three years ago. He added the Master Clinician Program has "its genesis in the Army's A Designator, the Air Force Medical Corps ME and MF Special Experience Identifiers, and

Master Clinician Recognition Programs that currently exist at other military treatment facilities around the country."

Bell said the purpose of the program is to recognize military and civilian providers who achieved excellence based on their clinical, research, teaching, mentorship and other performance.

"This year individuals come from specialties that include pediatrics, internal medicine, hematology/oncology, radiology, trauma surgery, pathology, neonatal intensive care, cardiothoracic surgery, psychology, physical therapy and [other specialties]. They were nominated by their department or service chiefs based on their superlative and sustaining clinical research, teaching and performance that exceeded the top 15 percent of providers at this command," Bell explained.

"The nominations were then evaluated, discussed and voted on by the Executive Committee of the Medical Staff and in total, there were over 50 honorees," Bell added. "Their selections truly represent the best of what Walter Reed has to offer our patients, their families and our staff."

Army Col. (Dr.) Michael Heimall, WRNMMC director, described the Master and Associate Master Clinician distinctions as "lifetime achievement

awards," earned based on the recipients' contributions to their specialties over the course of their time at the medical center. He called receiving the award "a milestone" in the recipients' careers. He also encouraged those honored to seek out and groom other Master Clinicians and Associate Master Clinicians at WRNMMC.

The distinction between Master Clinician and Associate Master Clinician is to achieve the former, the clinician not only had to achieve the productivity metrics, but also must have been out of residency and/or training for at least eight years. The Associate Master Clinician recognition has the same clinical productivity requirements, but the honoree must have been out of residency and/or training for at least four years.

Antevil, chief of cardiothoracic surgery, earned Master Clinician distinction this year. "This is certainly a meaningful designation in that it reflects clinical and academic achievement in the eyes of my peers," he stated. "It stands apart from most other means of recognition in military medicine, which are focused more on accomplishments in leadership and administration. Although these are both important areas for a successful military medical officer, we also take

pride in delivering outstanding care to our patients, and imparting the right knowledge and values in our future successors. The Master Clinician program is unique and important in emphasizing these critical elements of a dedicated and successful military provider," he added.

Retired Navy Capt. (Dr.) Jeffrey Greenwald, of Newborn Medicine in the Department of Pediatrics, was recognized as a Master Clinician during the ceremony. "I appreciate the honor and it is nice to know that the command recognizes those of us who provide patient care and clinical teaching," he stated.

Susan Marullo, diabetes nurse practitioner in General Internal Medicine Service, agreed, adding, "I felt overwhelming joy and gratitude when I received the Master Clinician award. I have enjoyed working as an NP at WRNMMC for the past 24 years, and this was the highlight of my career. This award felt like my professional 'Lifetime Achievement Award,' and I am so honored to have been recognized. It has been my honor and privilege to provide medical care to our military service members and their families, and to be part of a medical organization which gives me so much pride," she concluded.

BRYANT

From
Page 4

forth between NIH and Walter Reed Bethesda to learn and share information, knowledge and breakthroughs.

"I'm thankful I'm able enough, and my brain functions well enough to keep up with the changes," she laughed. "To be in cardiac care in my time, when I came from cardiac surgery that was routinely

10 to 12 hours long with lots of problems and side effects to now, when people go home within days, it's like a chance to see a miracle evolve."

She readily admits that within cardiac care there are a lot of questions still need to be answered, but to see its progression over the years has been amazing.

"Working here has been an honor," Bryant added about Walter Reed Bethesda. She said "there's an excitement about what you're doing" at the Flagship of Military Medicine.

She added that one of the rewards of her career was her recent induction as an associate into the American College of Cardiology, which bestows credentials upon cardiovascular specialists who meet its qualifications. Membership is based on training, specialty board certification, scientific and professional accomplishments and duration of active participation in a cardiovascular related field.

Another of the rewards of her career Bryant said is to be able to talk to

people, especially her patients, and hear their stories. "To be part of their experiences, because they have generally been through a lot, as well as for them to count me as a colleague and a friend is rewarding. There's a closeness in the [military community], and I've known some of these people for 30 years. You're part of a network of magnificent people. It's like family. We do get involved with our patients and still maintain the therapeutic edge. It's proven to be worthwhile for 52 years," she concluded.

WRNMMC Physician Receives Ellis Island Medal of Honor

By Kalila Fleming
WRNMMC Command Communications

A Walter Reed National Military Medical Center physician recently received the Ellis Island Medal of Honor during a ceremony on historic Ellis Island, New York.

The National Ethnic Coalition of Organizations, the sponsor of the Ellis Island Medals of Honor, presented Navy Cmdr. (Dr.) Jonathan Forsberg with the medal May 13. Forsberg is director of the Department of Defense's Osseointegration Program and an orthopedic oncologist at WRNMMC.

The Ellis Island Medals of Honor are annually presented each year on Ellis Island to a select group of individuals whose accomplishments in their field are deemed inspiring to the nation as determined by the NECO.

"The Ellis Island Medals of Honor embody the spirit of America in their celebration of patriotism, tolerance,

brotherhood and diversity," NECO officials explained in a release. "They recognize individuals who have made it their mission to share with those less fortunate their wealth of knowledge, indomitable courage, boundless compassion, unique talents and selfless generosity; all while maintaining the traditions of their ethnic heritage as they uphold the ideals and spirit of America," they added.

Since its founding in 1986, the Ellis Island Medal of Honor has been officially recognized by both Houses of Congress as one of our nation's most prestigious awards. Past honorees have included six U.S. presidents, former Secretary of State and presidential candidate Hillary Clinton, as well entertainer Frank Sinatra, business icon Lee Iacocca, music producer Quincy Jones, boxer and activist Muhammad Ali, Nobel laureate Elie Wiesel, U.S. prisoner of war survivor in World War II

Navy
Cmdr. (Dr.)
Jonathan
Forsberg

and Olympian Louis Zamperini and Civil Rights activist Rosa Parks, just to name a few.

Forsberg has helped to pioneer one of the first American osseointegration programs in the field. The procedure involves the direct skeletal attachment of prosthesis. His work at Walter Reed Bethesda comes at a time when the nation has been engaged in one of its longest conflicts resulting in numerous wounded service members, many treated by the Navy physician.

"The past 15 years or so has been characterized by two major conflicts that generated an influx of combat casualties... my treatment philosophy revolves around solving challenging problems, whether they are diagnostic, reconstructive, or treatment-related," Forsberg said.

Director of the Musculoskeletal Oncology and Orthopedic Research Department and colleague, Army Lt. Col. (Dr.) Kyle Potter stated, "All of our staff in Orthopedic Surgery and the larger Uniformed Services University-Walter Reed Department of Surgery could not be more proud of [Forsberg's] accomplishments and this spectacular recognition."
